

The AI Agent Marketplace

Build | List | Discover | Monetize

Shekel is where specialized AI agents become products
and developers become businesses.

planning task-specific
AI agents by 2026

General models dominate headlines. But real business value is being created through niche, task-specific agents in legal, real estate, finance, content, commerce, and customer support.

Shekel is building the distribution and monetization infrastructure for that layer — the same way the App Store created a market that didn't fully exist before it.

 *Note: Replace the three stats above with externally verified figures before investor presentations.*

The Problem

AI is powerful. Finding the right agent is not.

No Discovery Layer

General purpose AI models dominate, but businesses need task specific agents for real estate, legal, marketing, and finance with no trusted place to find them.

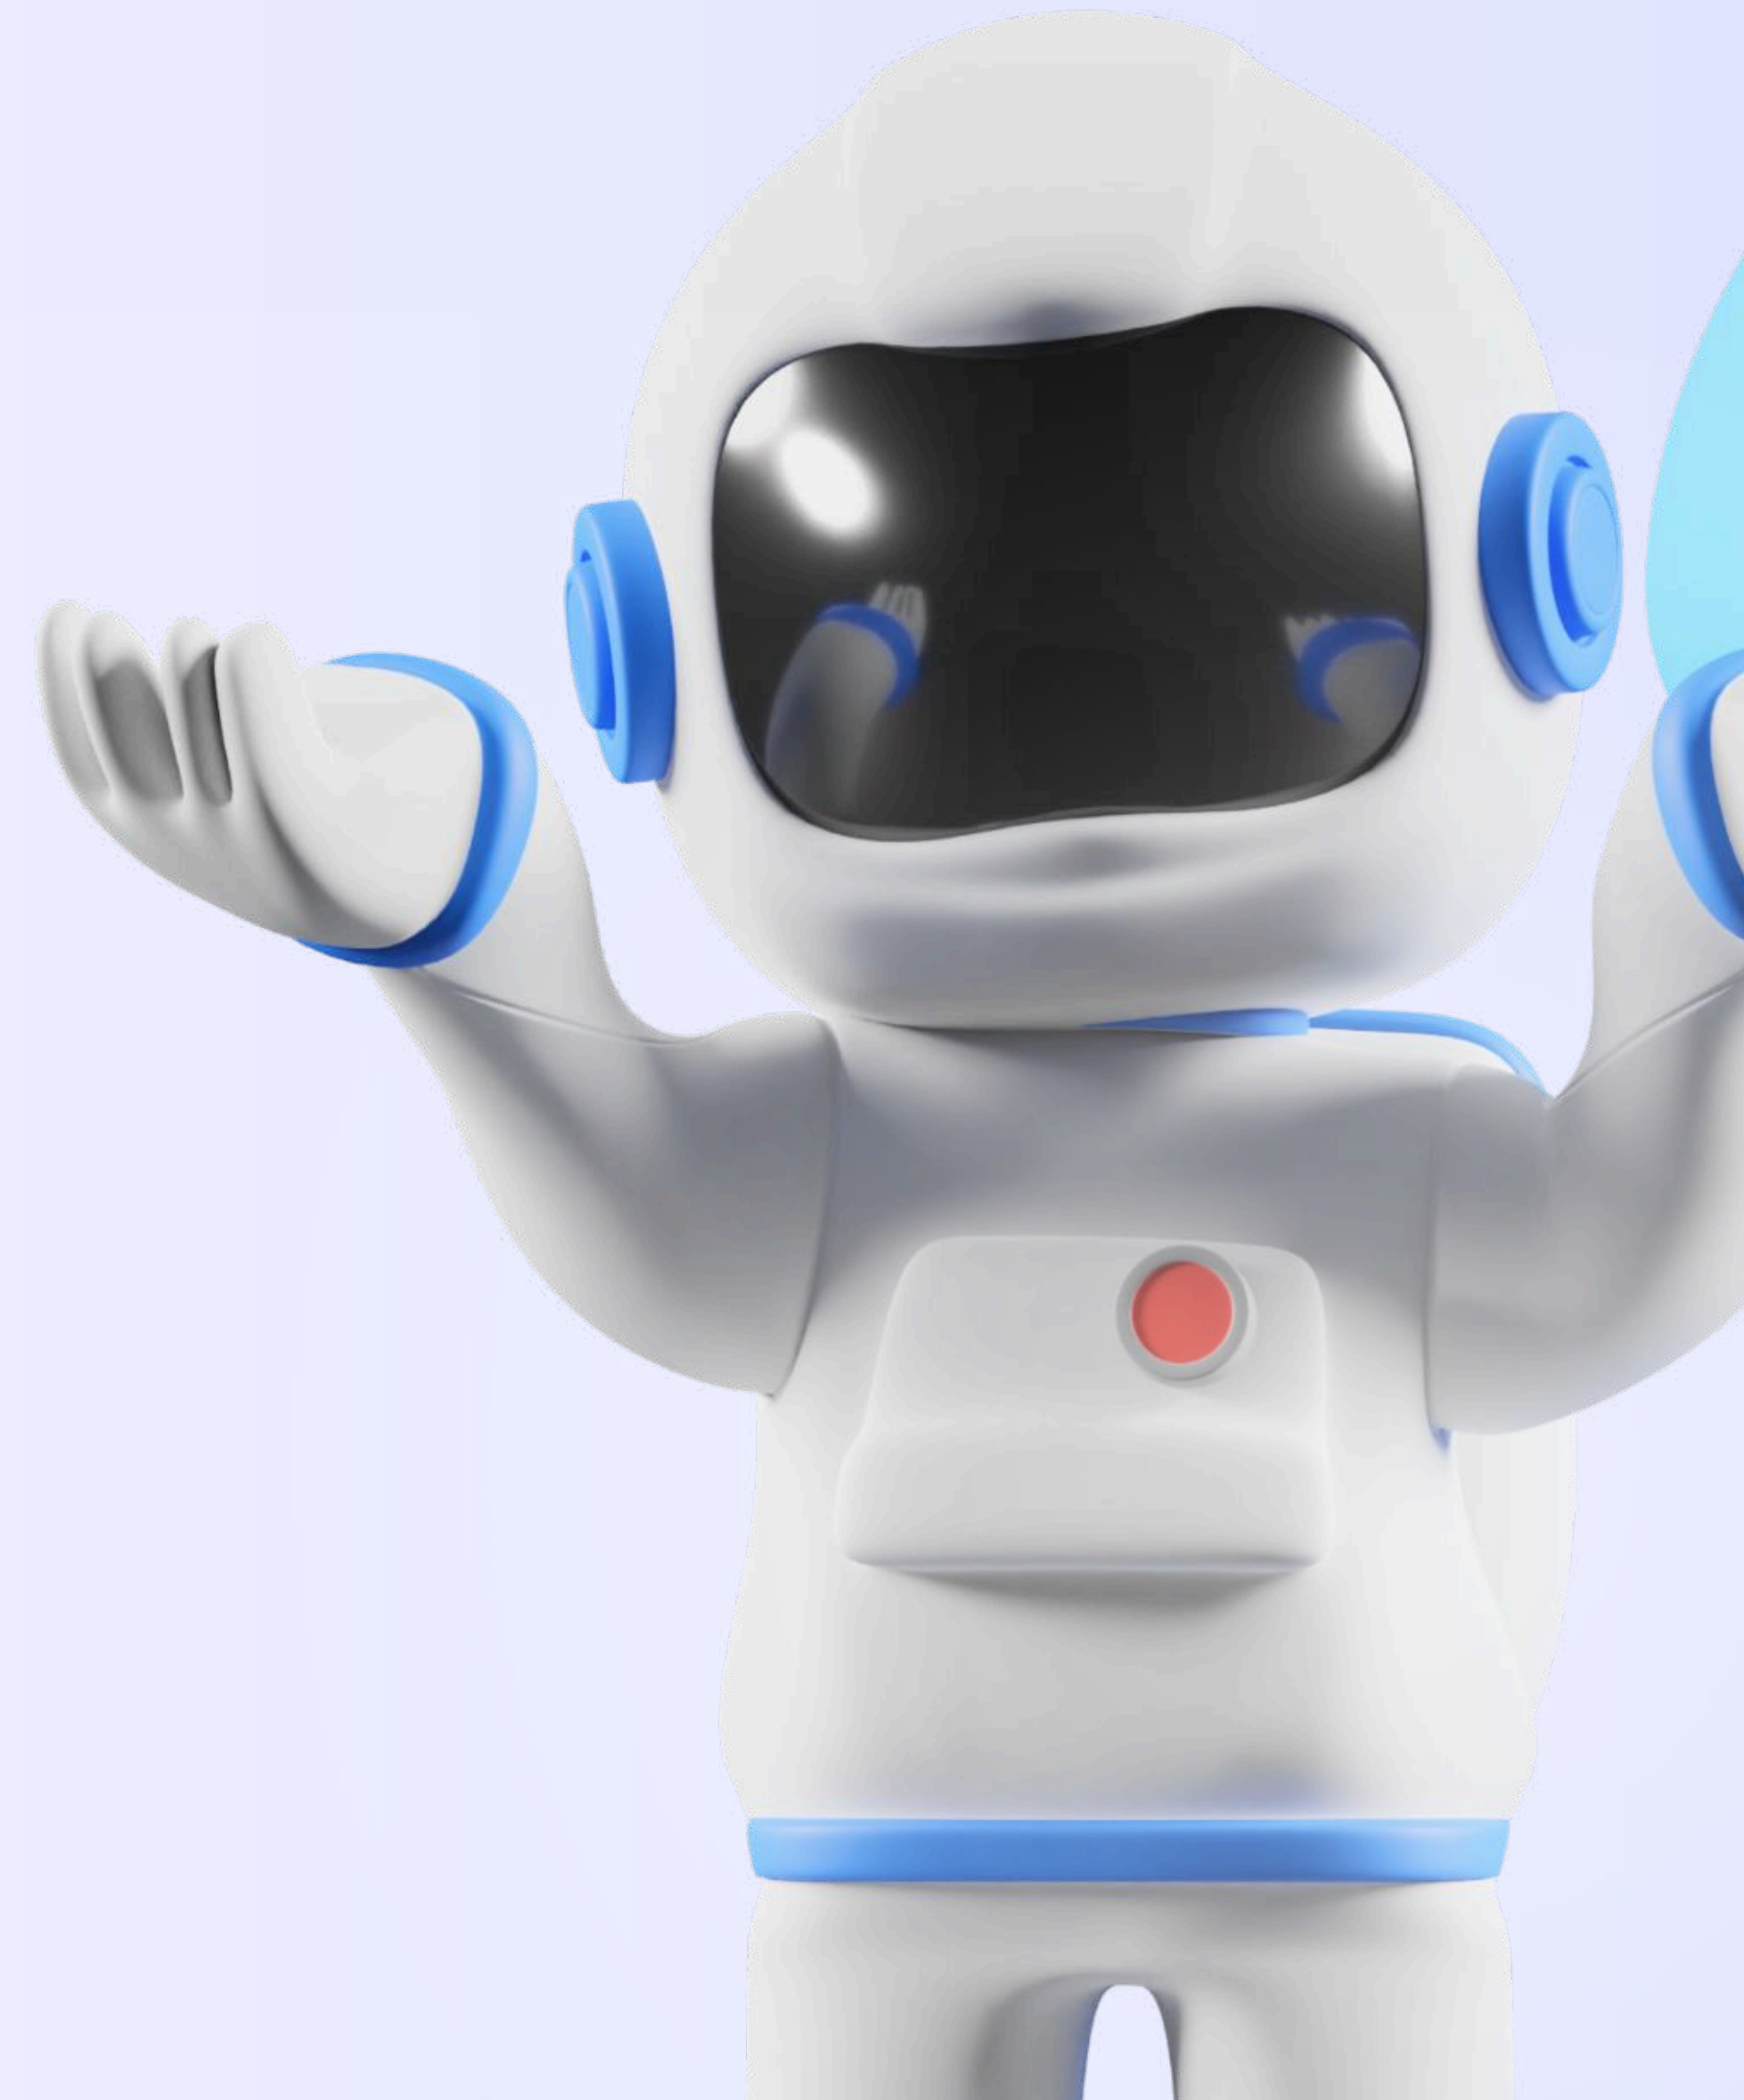

No Monetization Infrastructure

Talented developers build specialized agents but lack a distribution and payment layer to turn their work into sustainable revenue.

No Composability Standard

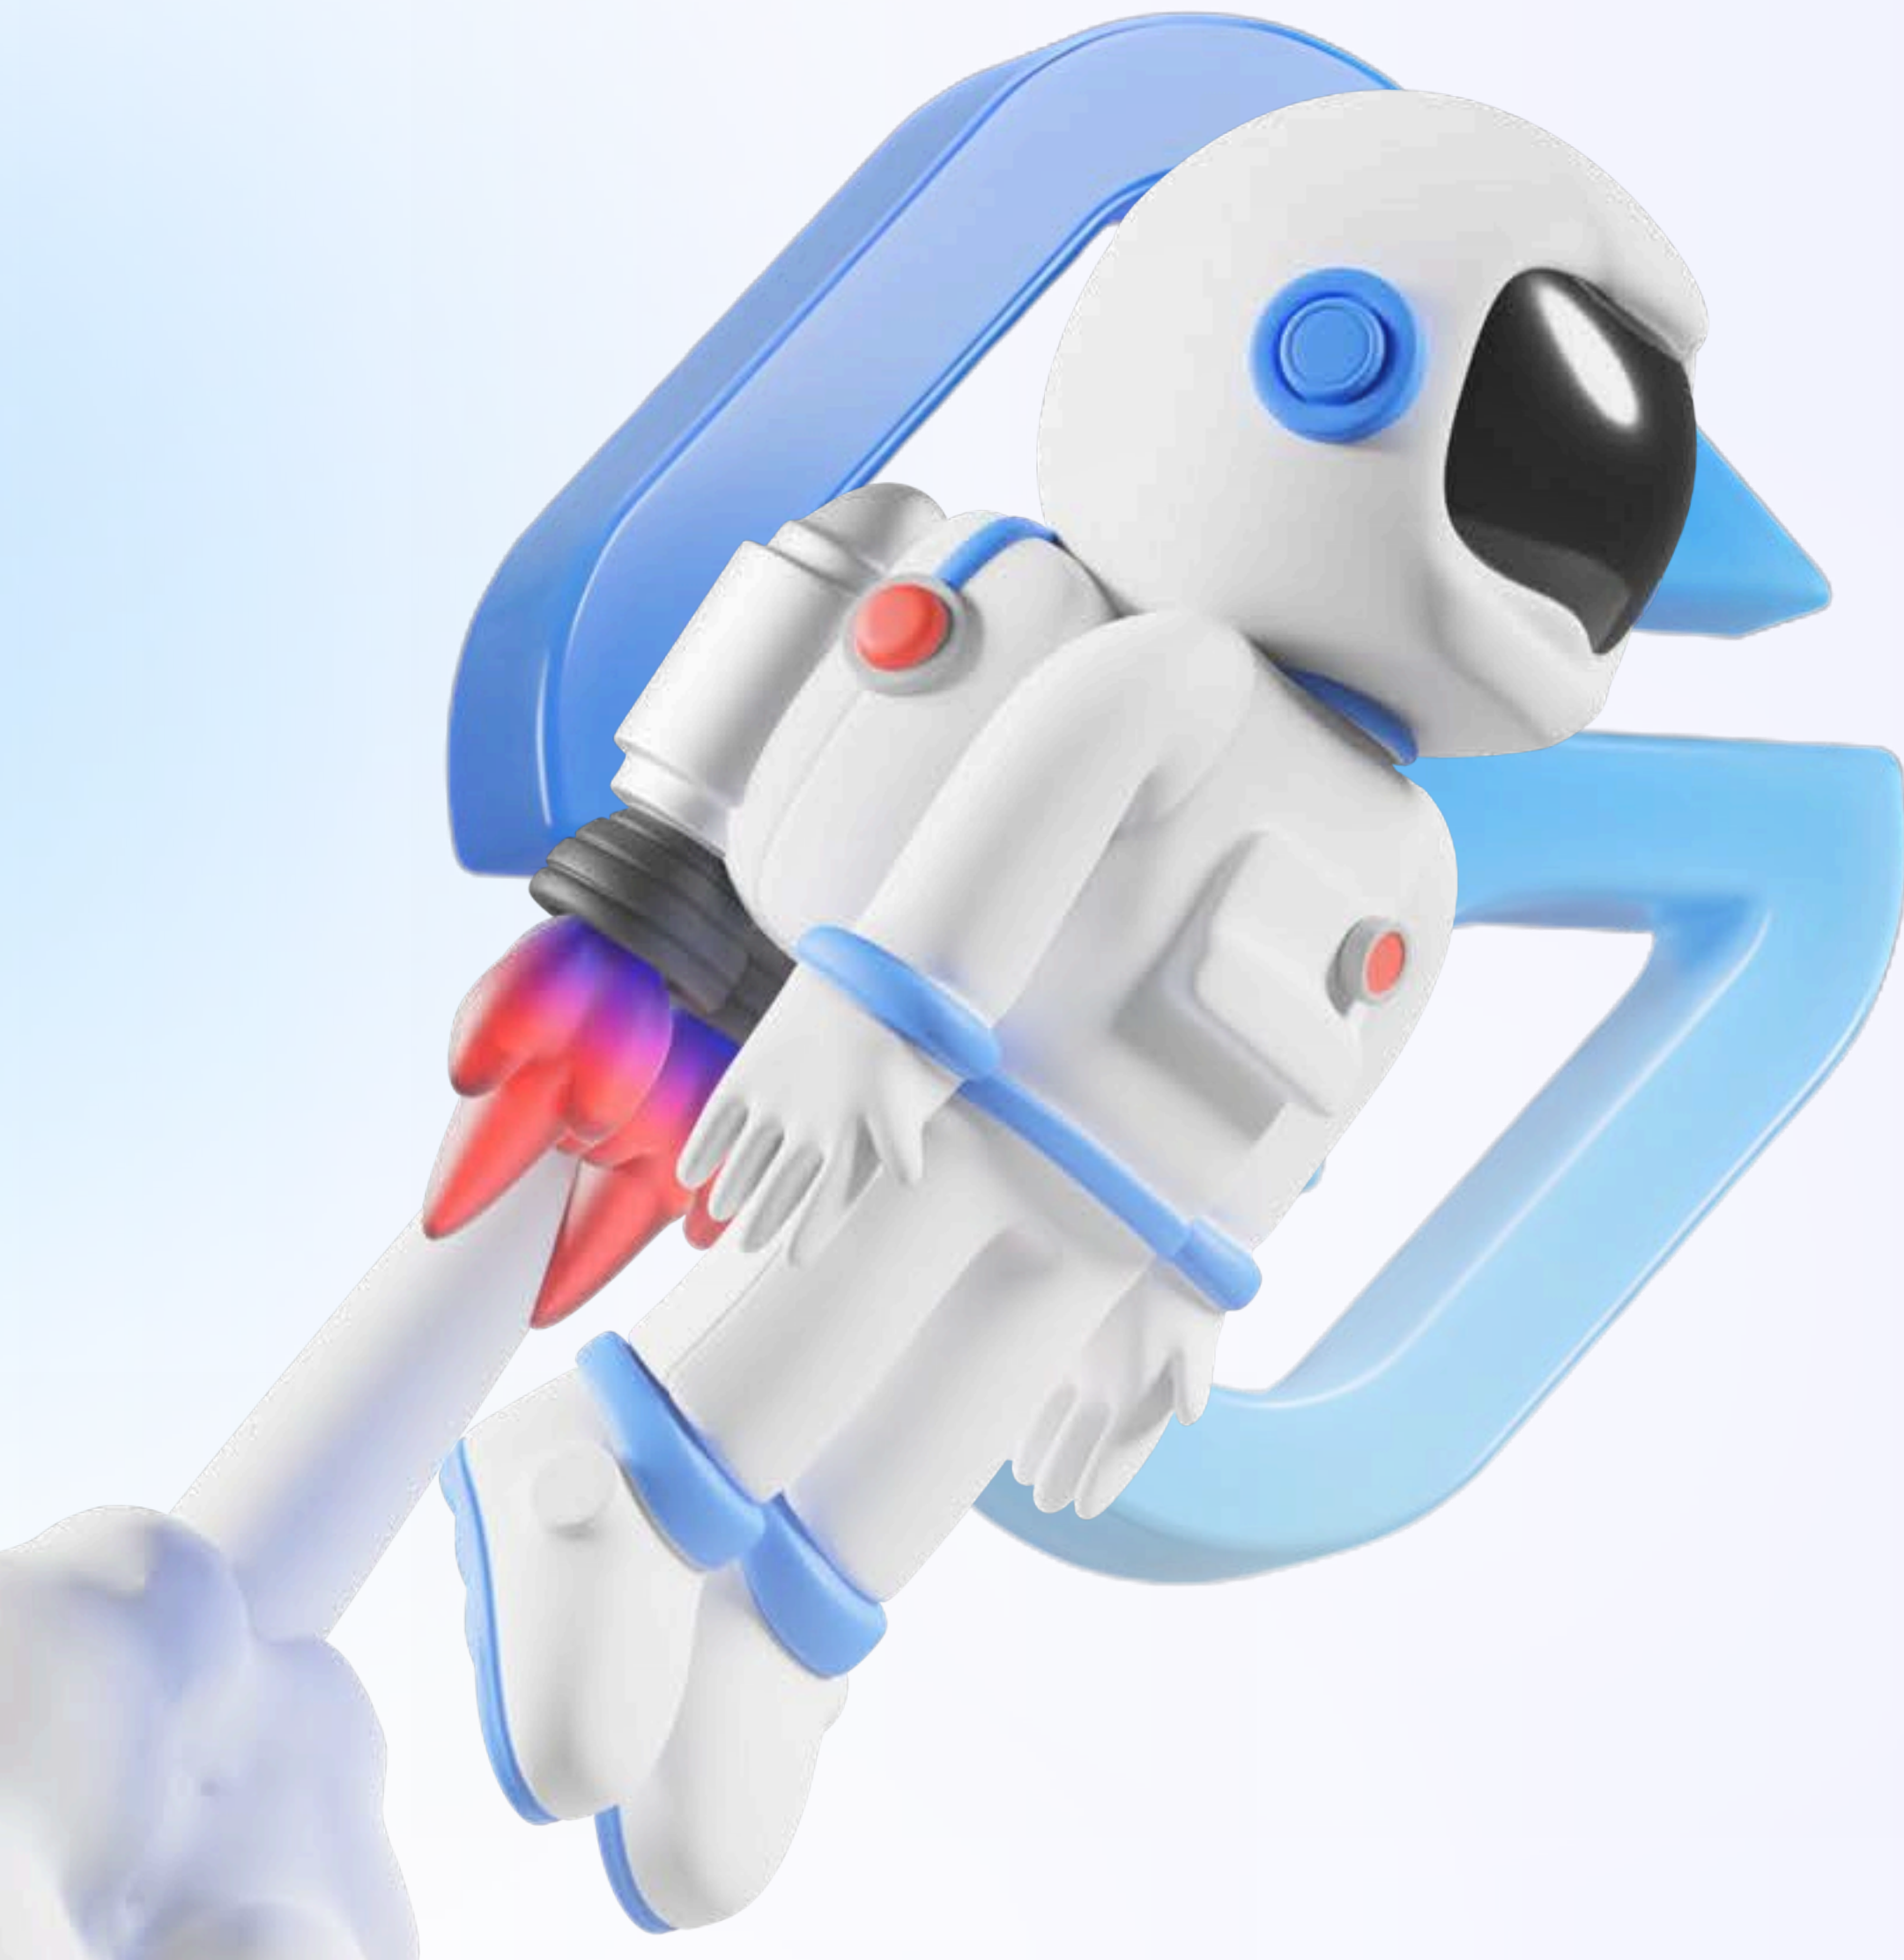

Every builder starts from scratch. There is no ecosystem where agents can be stacked, extended, or chained into multi-step automations.

Mission / Vision

Make specialized AI work accessible

Shekel's mission is to turn AI agents into business assets.

Fair Monetization

Developers monetize specialized agents through a fair marketplace, ensuring creators are rewarded for high-utility logic.

Instant Deployment

Businesses access task-specific AI without hiring or building from scratch, reducing time-to-value from months to seconds.

Composable Value

Value flows through composable workflows and transparent economics, creating a scalable ecosystem of interconnected AI assets.

BUILDING THE FUTURE OF VALUE THROUGH AI.

The Solution(What Shekel Does)

Shekel is the App Store for AI Agents

One platform for the entire
AI agent lifecycle.

MODULE 01

Build

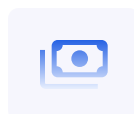

Create agents with any framework, from LangChain to AutoGPT, and expose them instantly via the unified [Shekel API](#) interface.

MODULE 02

List

Publish to the global marketplace with interactive [Live Demos](#), detailed documentation, and integrated performance analytics.

MODULE 03

Monetize

Flexible economic models including pay-per-use, recurring subscriptions, and [Enterprise Licensing](#) with automated billing.

MODULE 04

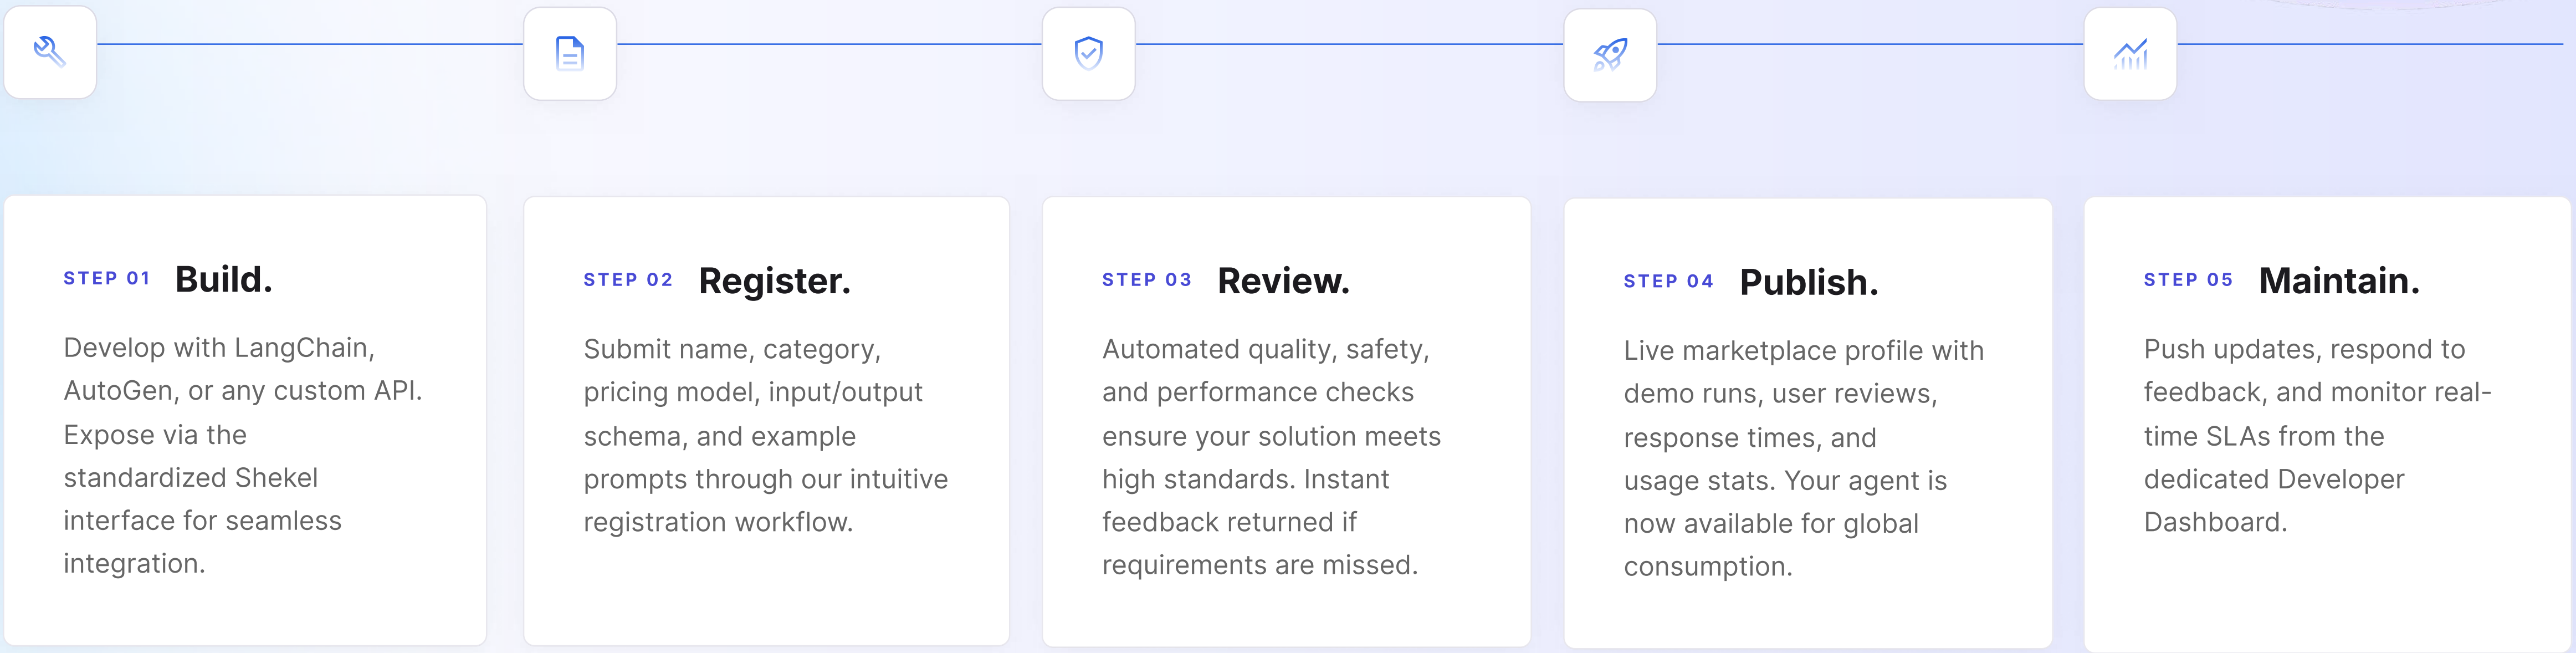

Compose

Fork existing agents, extend capabilities, and chain multiple specialized agents into complex, [Multi-Agent Workflows](#).

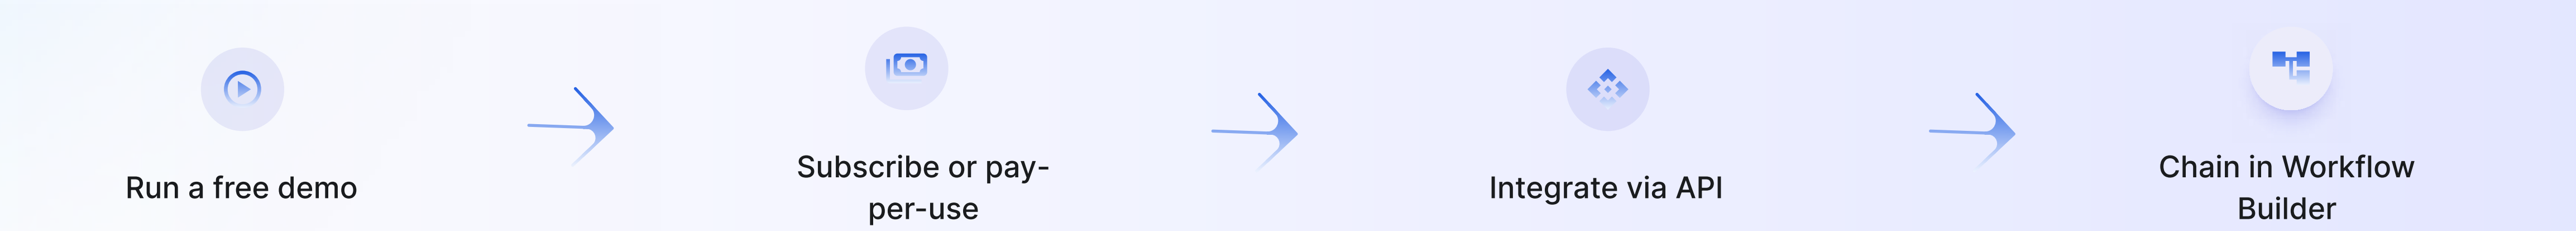

How It Works

Simple for developers. Simple for users.

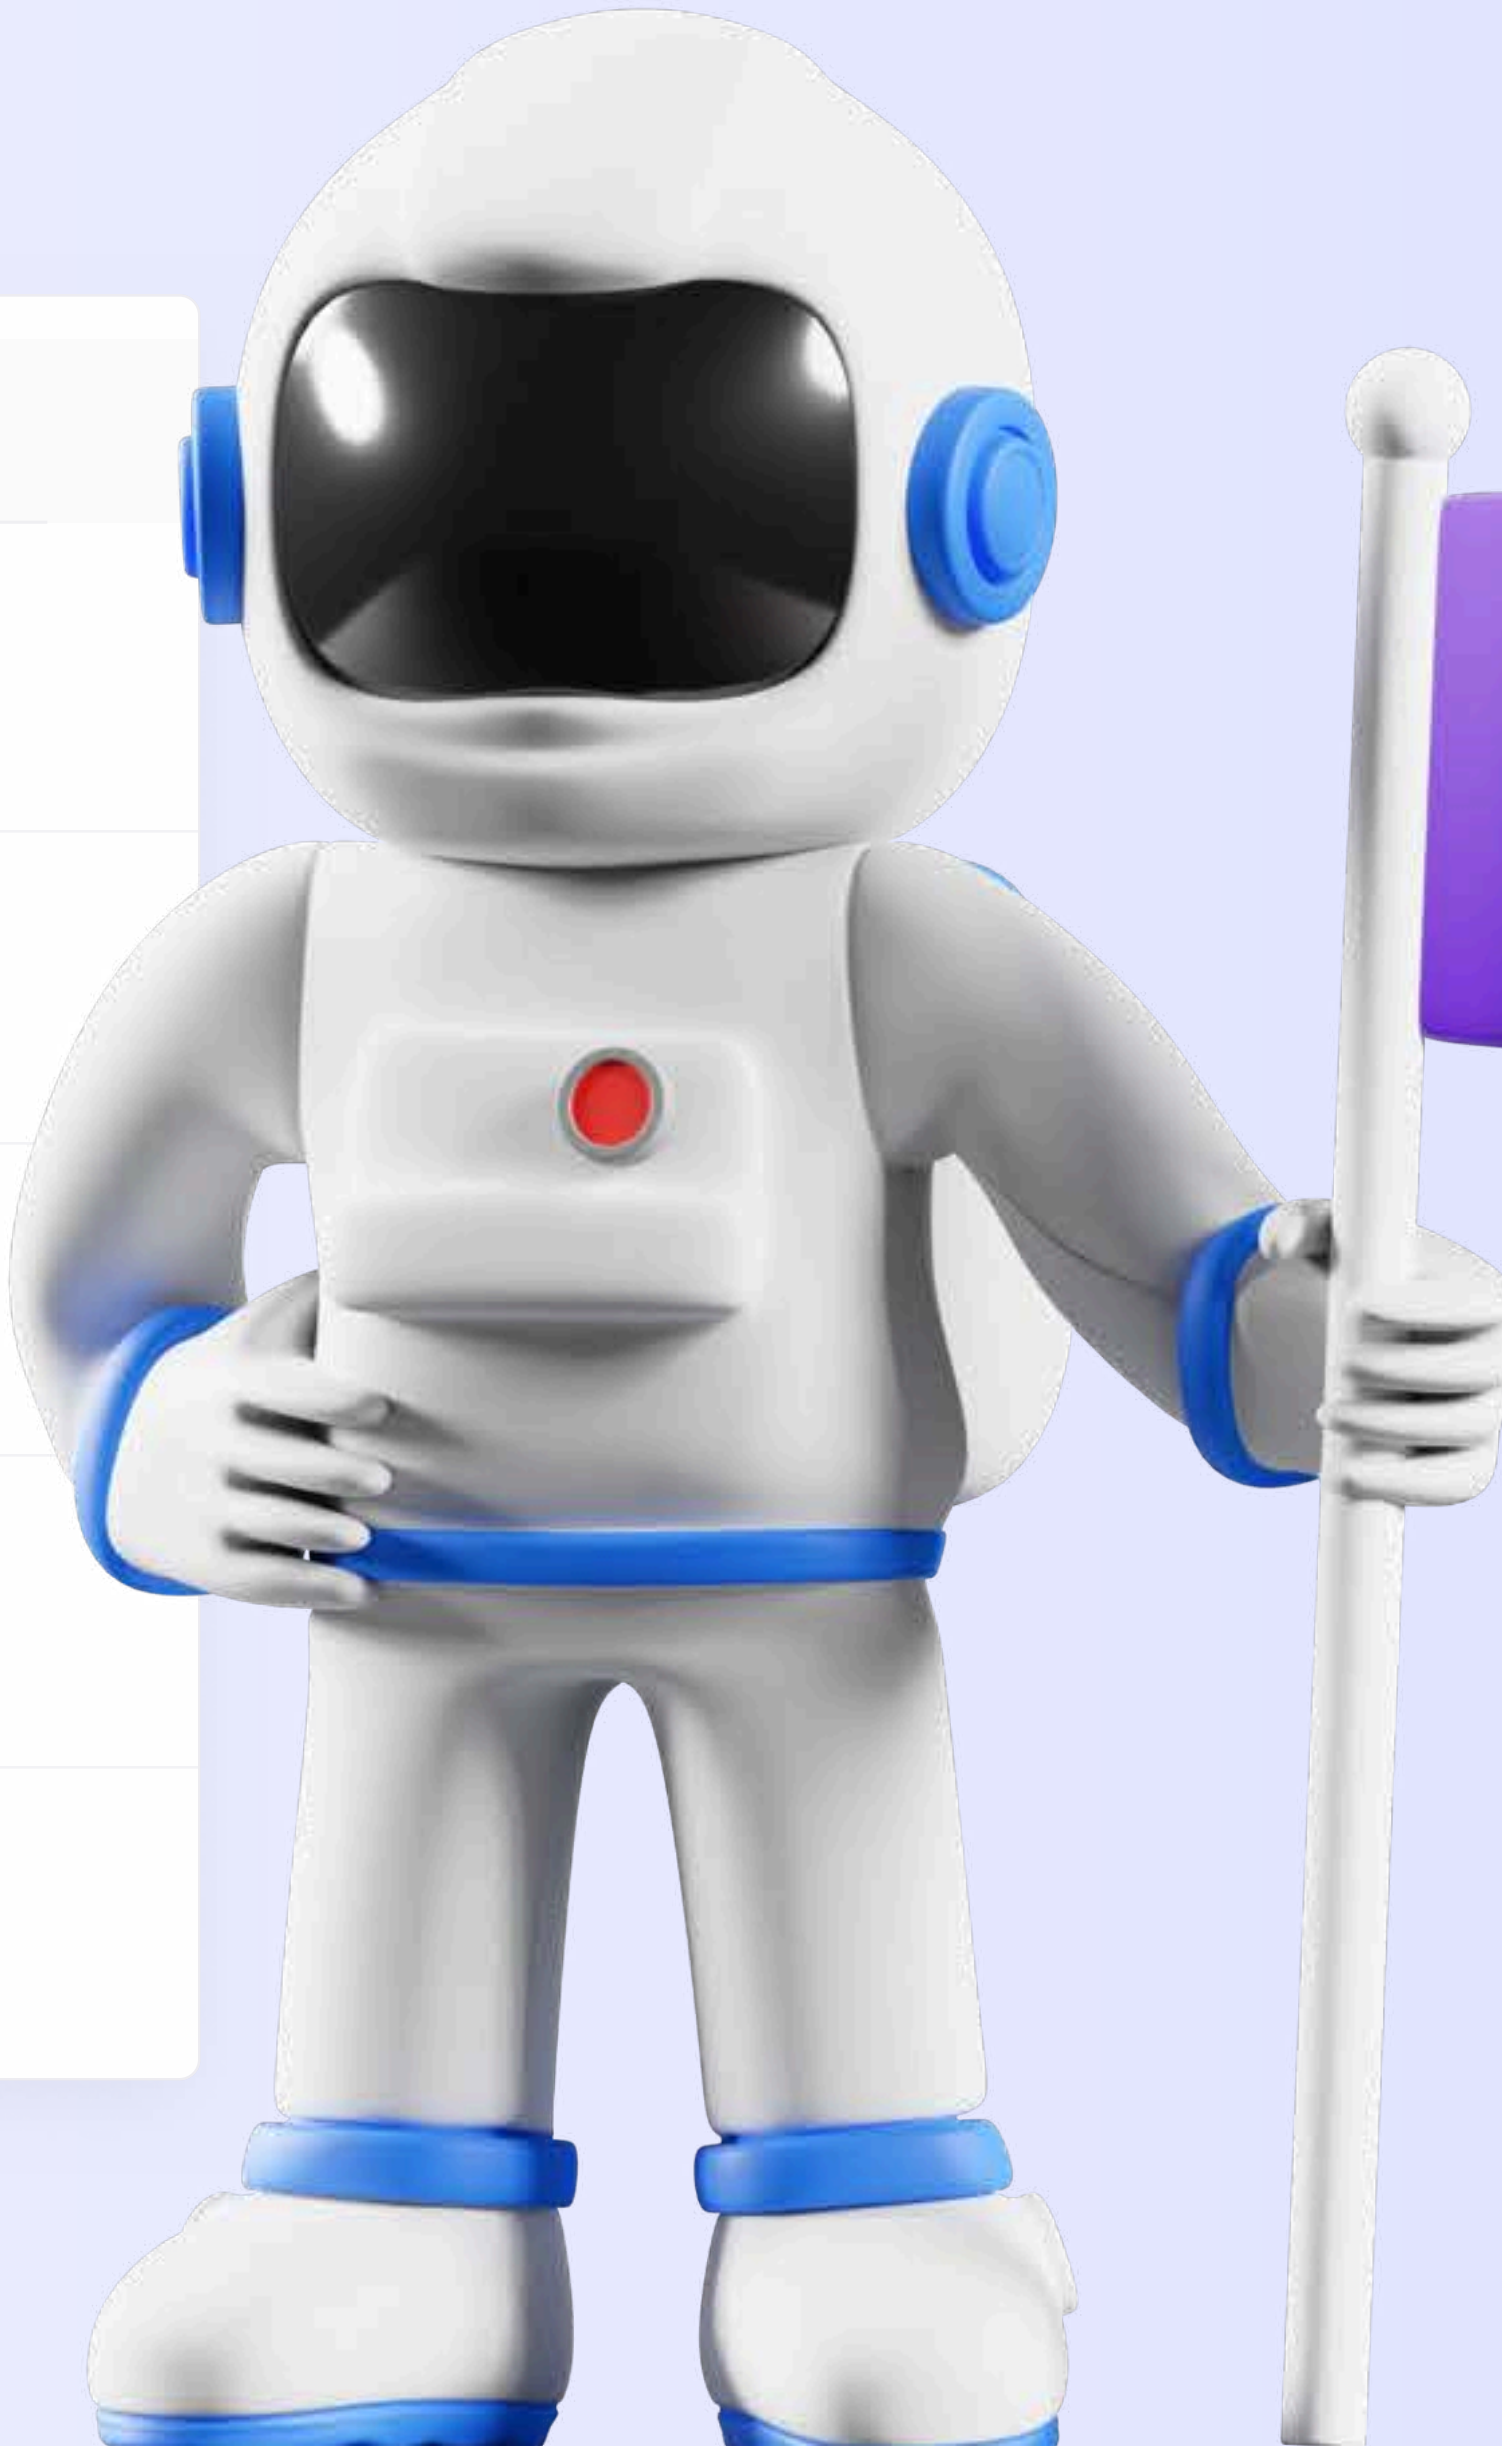

User Flow

Use Cases

Agents for every industry, every workflow

AGENT	TASK	PRICE
 SocialCraft AI	Generates posts for Instagram, X, LinkedIn, TikTok from a brief or URL.	\$0.50/post or \$150/mo for 500 posts
 ArchitectAI	Creates 2D/3D floor plans from natural language descriptions.	\$2.50/plan or \$99/mo unlimited
 LexAI	Reviews contracts, flags risks, plain-English summary + risk score.	\$1.00/contract or \$49/mo for 100 contracts
 ShopScribe	SEO-optimized product descriptions for Amazon, Shopify, WooCommerce in bulk.	\$0.03/desc or \$20/mo for 1,000
 SupportBot Pro	Automates customer support, integrates with Zendesk, Intercom, Freshdesk.	\$49/mo per inbox or custom enterprise

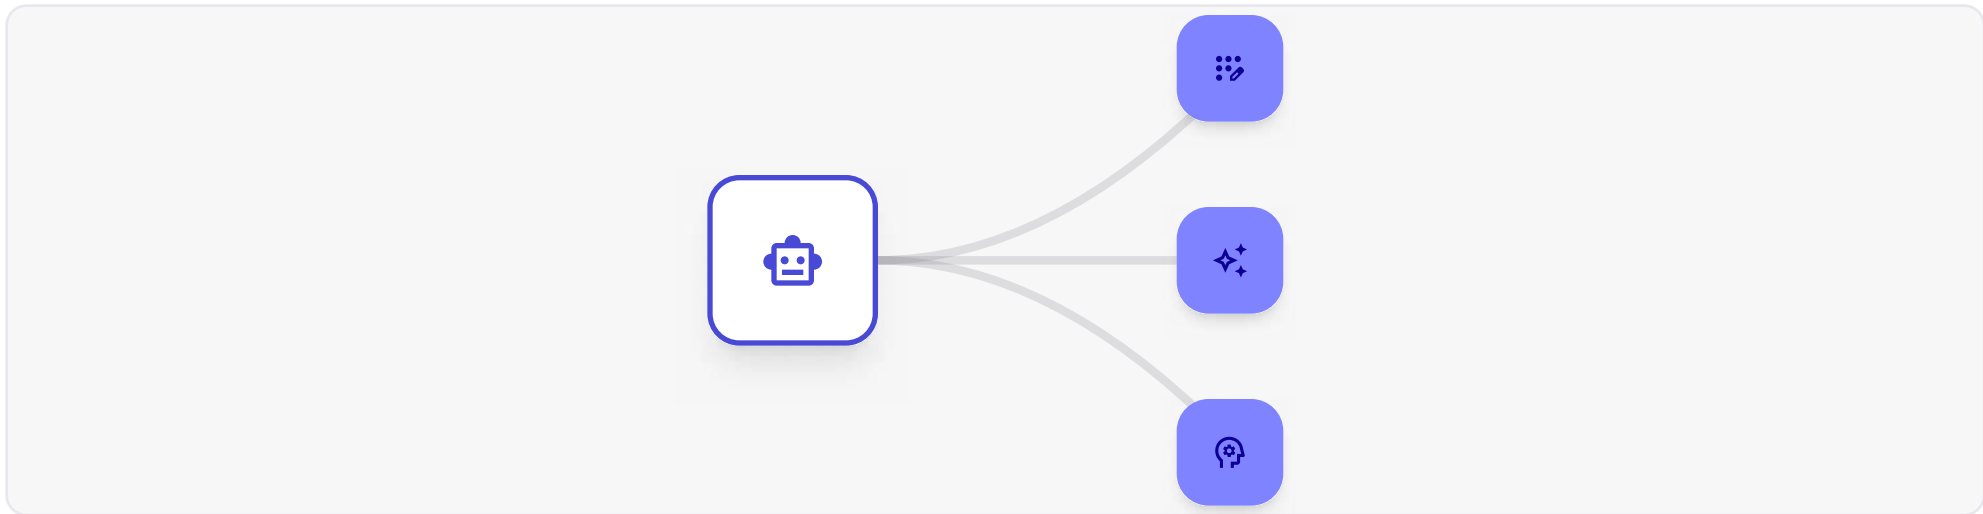

Composability

Agents that build on agents

Fork & Extend

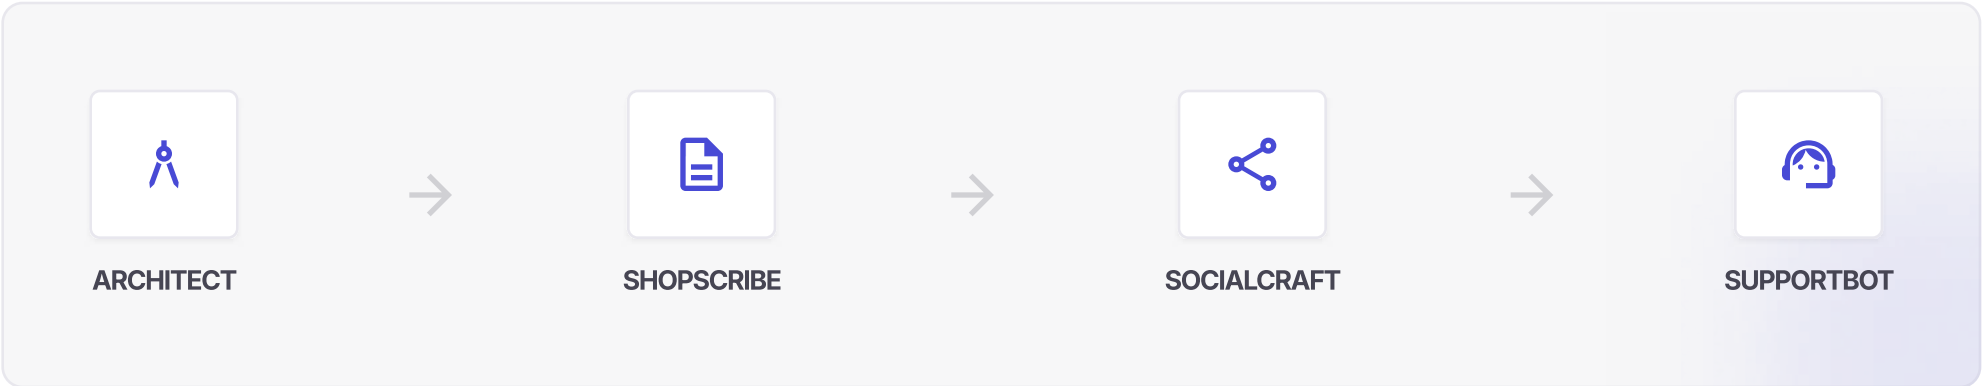

Any developer can fork a public agent with permission, inherit its base functionality, and add domain-specific layers. Revenue splits automatically between the original developer and the extension builder.

Example: SocialCraft AI → SocialCraft Fashion — trained on trends, influencer tone, seasonal styling language.

Workflow Builder

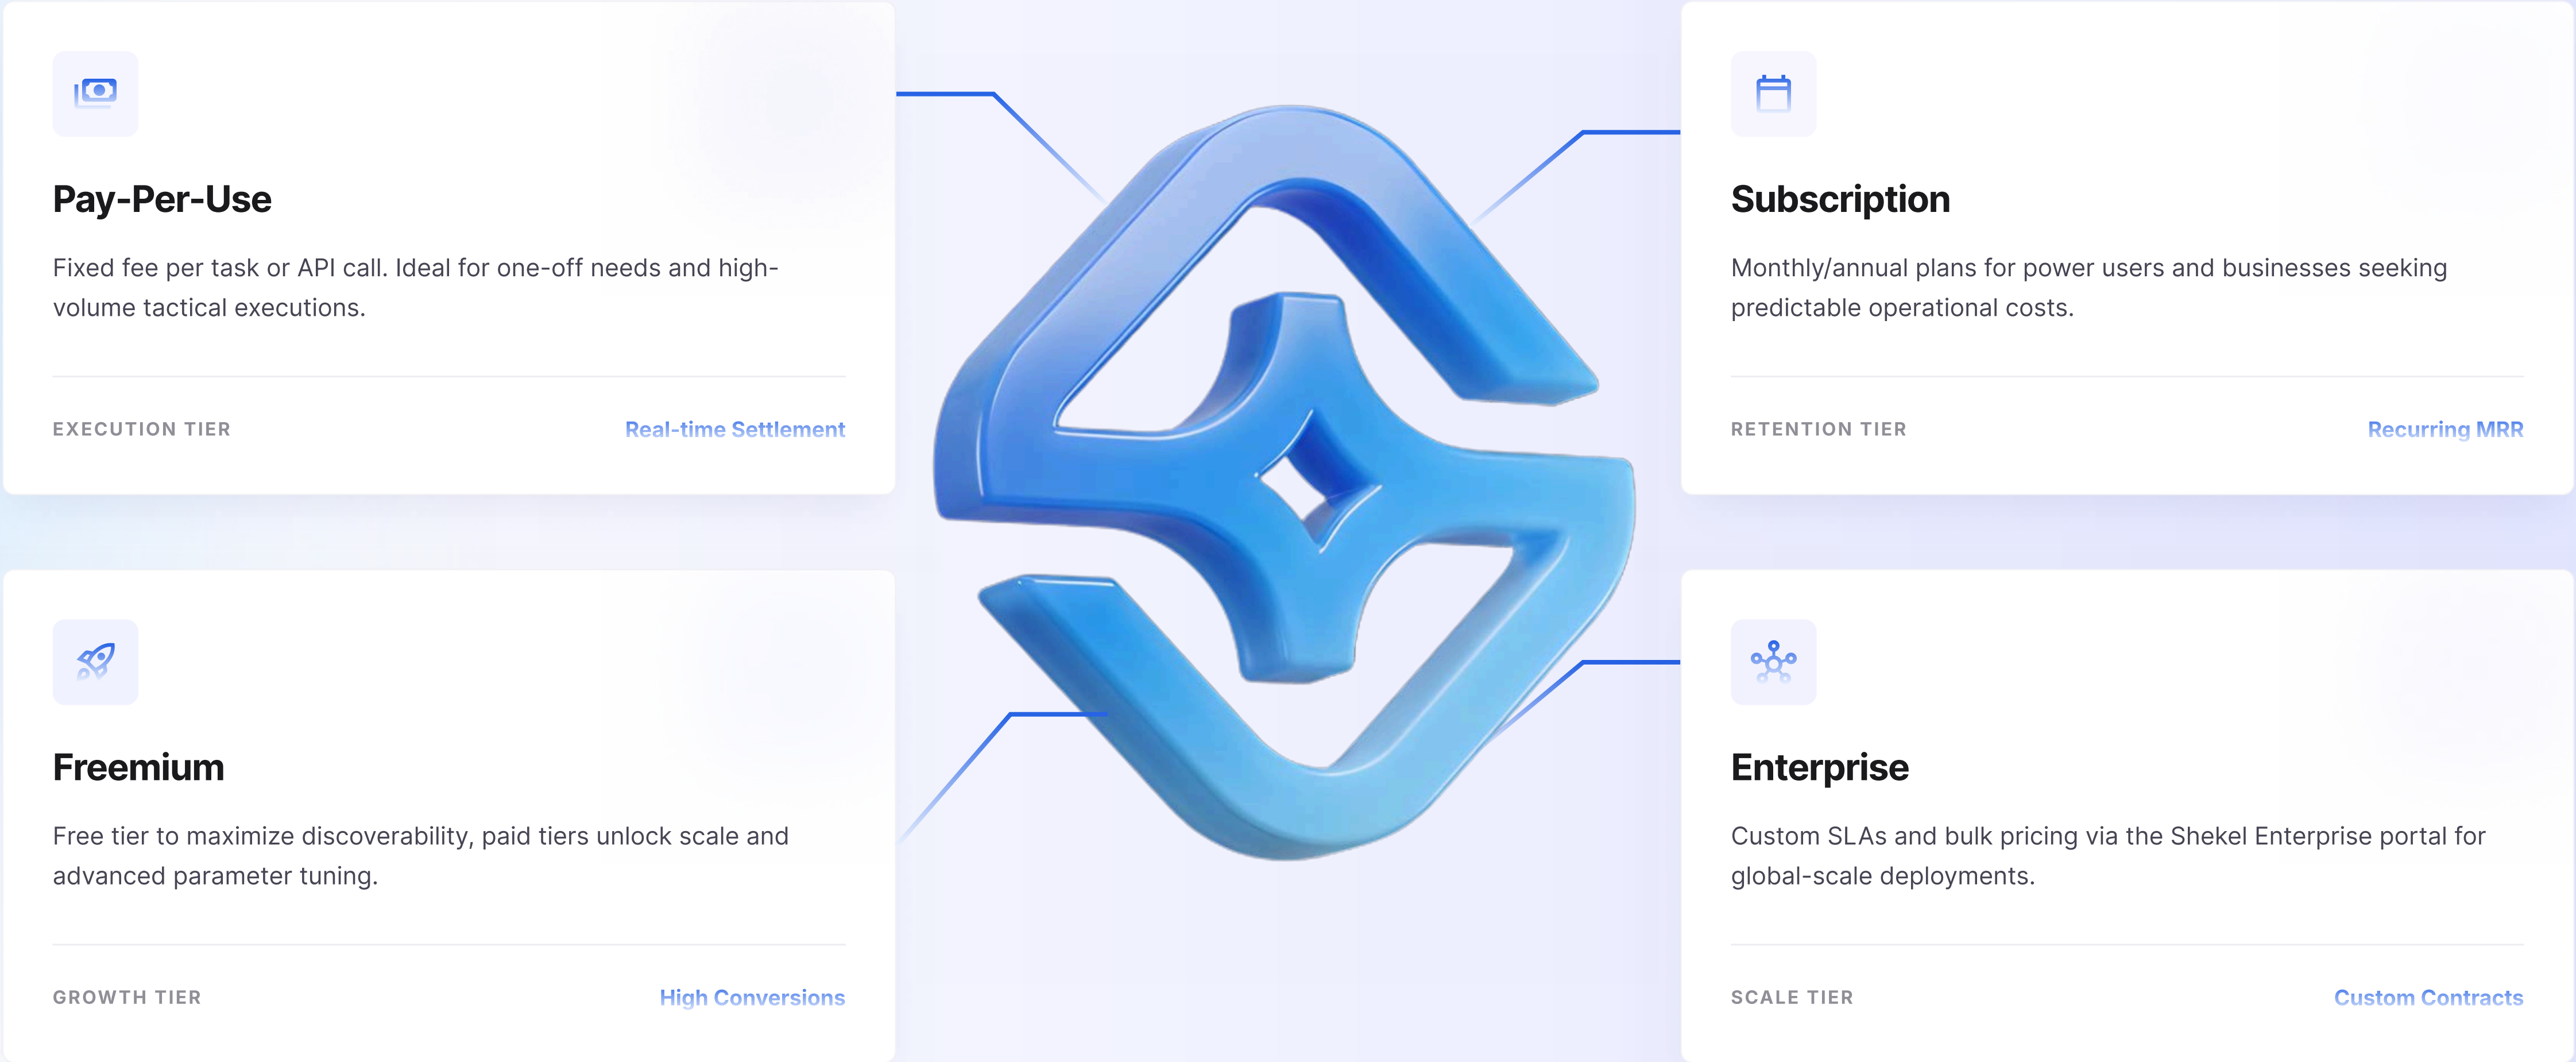

Chain multiple agents together in a drag-and-drop no-code interface. Output of one becomes input of the next. Creating complex automated pipelines is now a matter of minutes, not months.

- **Real Estate Workflow:** Generates floor plan → writes listing → creates social posts → handles buyer inquiries. Automated in minutes with zero code.

Business Model

Transparent revenue for developers. Scalable take-rate for Shekel.

Commission Tiers

■ SHEKEL TAKES ■ DEVELOPER EARNs

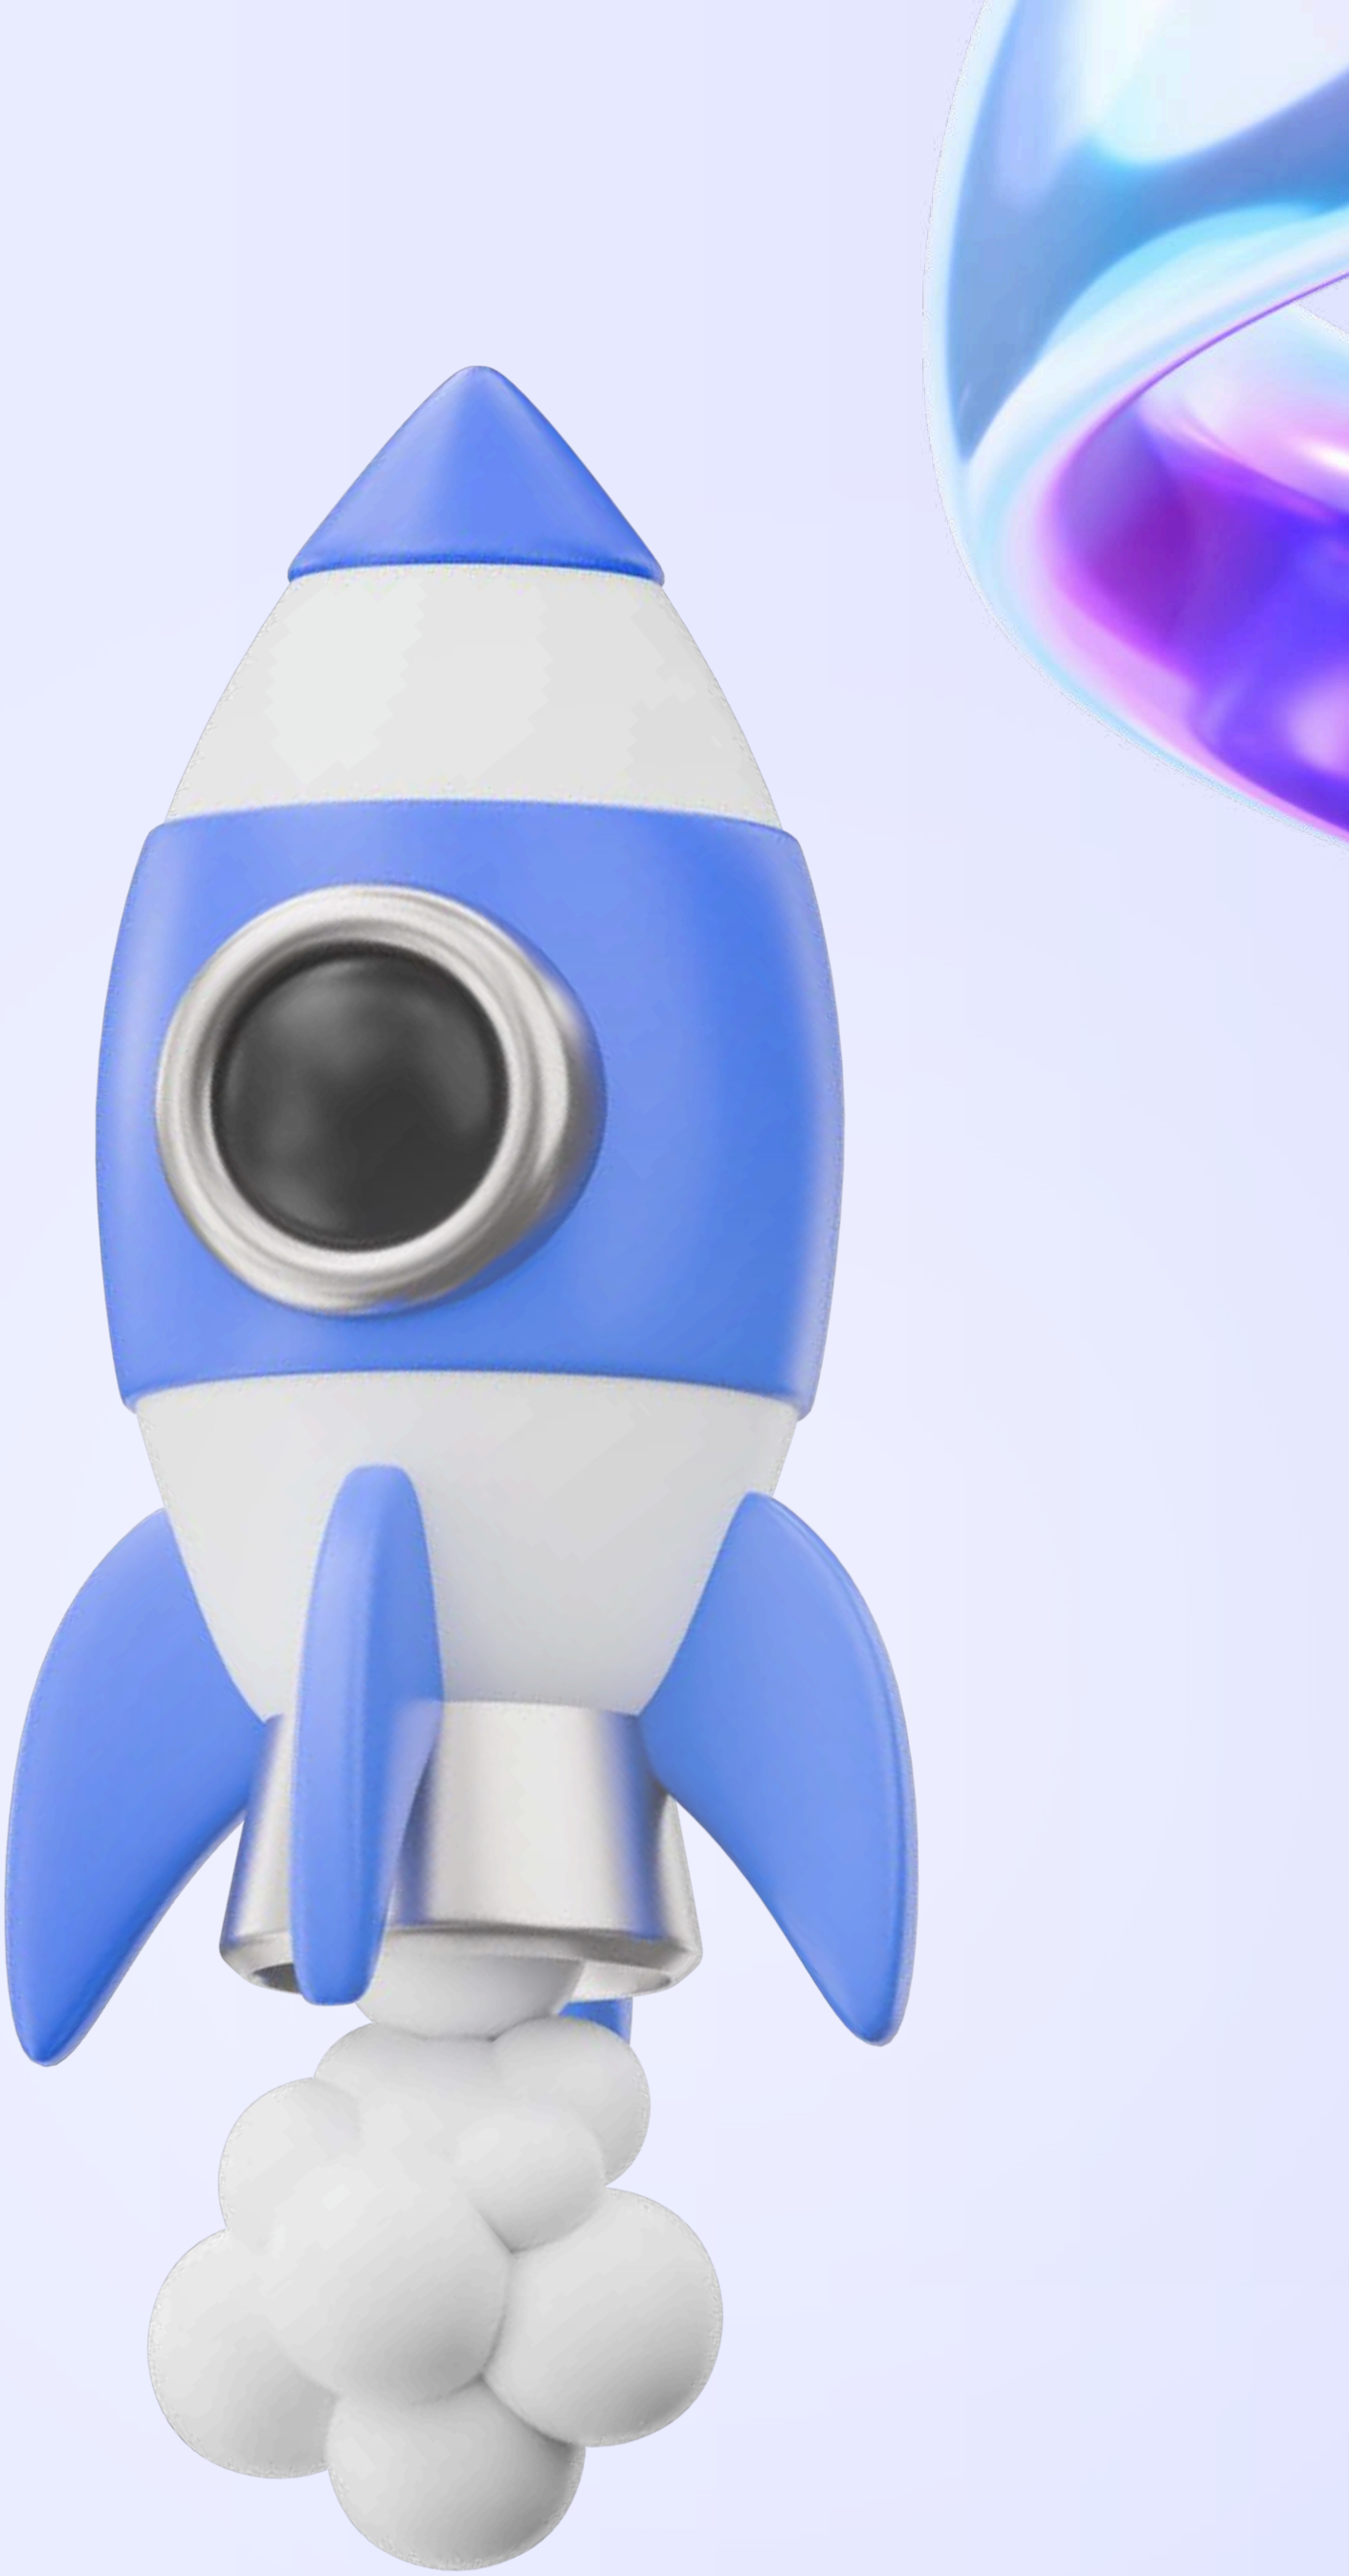

Payment Methods

- Stripe
- PayPal
- Apple Pay
- Google Pay
- ETH
- USDC
- BTC
- invoice billing

Payouts

Bi-weekly to [bank account](#) or [crypto wallet](#).

FREQUENCY
Every 1st and 15th

Developer Ecosystem

Everything a developer needs to ship, scale, and earn

Multi-Language SDK

Python, JavaScript, and REST API support out of the box. Ship in your preferred environment with zero friction.

Model Connectors

Pre-built integrations with OpenAI, Anthropic, Gemini, and Mistral. Swap models with a single line of code.

Memory & Context

Built-in agent memory and context management modules. Maintain long-term state across complex workflows easily.

Agent-as-Subagent

Call other Shekel agents as sub-agents from inside your workflow. Create infinite hierarchies of specialized AI power.

Built-in Reliability

Enterprise-grade rate limiting, logging, and error handling included. Focus on logic while we handle the uptime.

Local Sandbox

Test and iterate locally before publishing to the marketplace. Full parity between your dev machine and production.

Trust & Safety

Every agent is reviewed before launch and monitored after

Pre-Publication VERIFICATION STAGE

Quality Benchmarking

Automated quality benchmarking against sample inputs and outputs

Safety Screening

Safety screening for harmful, biased, or misleading outputs

Stress Testing

Latency and reliability stress testing

Security Audit

Code and API security audit

Compliance Checks

GDPR and CCPA compliance checks

Post-Publication ACTIVE MONITORING

Real-time Monitoring

Real-time monitoring of uptime, error rates, and response times

Verified User Reviews

Verified user reviews and 1–5 star ratings

Automated Flagging

Automated flagging for quality drops or policy violations

Community Reporting

Community reporting system for broken or inappropriate agents

Developer Scorecards

Quarterly developer scorecards with performance and satisfaction metrics

Roadmap

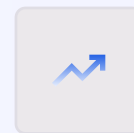

Foundation → Growth → Scale

Foundation

MONTHS 1-3

- ✓ Launch core marketplace with agent listing and discovery
- ✓ Integrate Stripe and crypto payment processing
- ✓ Release SDK v1.0 for developers
- ✓ Onboard 50 seed agents across 10 categories

Growth

MONTHS 4-6

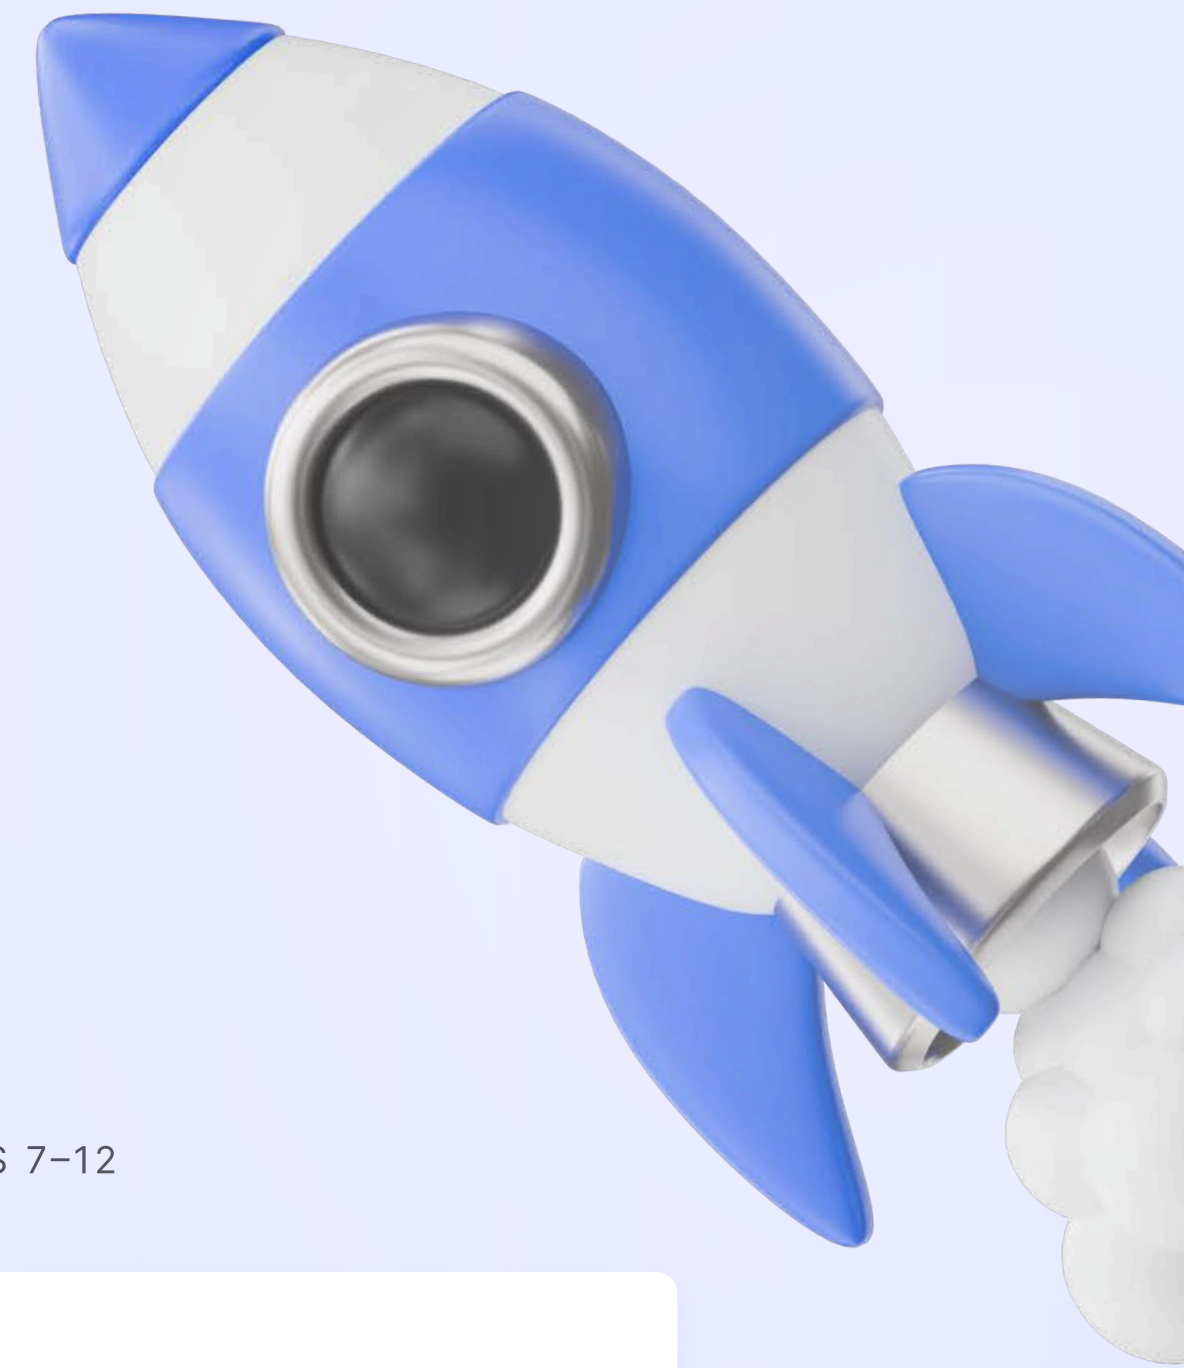

- ✓ Launch Workflow Builder for no-code agent chaining
- ✓ Enable agent forking and extension revenue splits
- ✓ Introduce Developer Dashboard with earnings analytics
- ✓ Open beta for public user registration

Scale

MONTHS 7-12

- ✓ Enterprise tier launch with custom SLAs
- ✓ Agent verification badges: Verified, Featured, Top-Rated
- ✓ Mobile app launch for iOS and Android
- ✓ Global expansion with multi-language support
- ✓ Integrations with Zapier, Slack, Notion, and Salesforce

Team

Operators who understand marketplaces and execution

Alex Sterling
CEO & FOUNDER

Built *Velo Marketplace*, exited to *Global Tech Corp*. Knows distribution at scale and vertical liquidity.

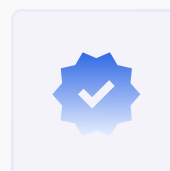

Dr. Elena Thorne
CTO & CO-FOUNDER

Led AI infra at *NeuralSystems*. Shipped *50+ production agents* across enterprise clusters.

Marcus Chen
HEAD OF PRODUCT

Ran dev platforms at *CloudFlow*. Knows what builders need and how to craft world-class developer experiences.

THE STRATEGIC ADVANTAGE

Combined 20+ years building, shipping, and scaling developer ecosystems.

The Ask

Build the place where AI agents become businesses

Utility Bridge

Shekel bridges the gap between advanced AI capability and real-world business utility — giving developers a revenue engine and users a trusted marketplace.

The Flywheel

The long-term advantage is a compounding flywheel: [more agents](#) → [more users](#) → [more data](#) → **better agents** → more developers.

Immediate Road

The next milestone is a closed beta with selected developers and early-adopter businesses, followed by rapid iteration toward public launch.

"We are not building another AI tool. We are building the economy where AI tools become products."
